

Innovation beyond Sight and Sound

Take control of your environment. The new Luminaudi™, designed in the US, gives the power and flexibility to improve your surroundings. With its built in stereo Bluetooth® sound system, enhanced sound is at your fingertips. Luminaudi™ is a unique modular system, housed in durable aluminum, that mounts to the ceiling or wall, freeing up valuable shelf and floor space. With its standard, energy efficient LED programmable tri-color (natural light, warm white, day light) light kit, set the color and brightness to the level to match the mood or activity. Separate modules, which include projectors, 360° cameras, air purifiers, and more, will be made available to meet current or future residential or commercial needs.
